GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Steam and gas turbines, PG_00055896		
Field of study	Power Engineering, Power Engineering, Power Engineering		
Date of commencement of studies	October 2022	Academic year of realisation of subject	2024/2025
Education level	first-cycle studies	Subject group	Obligatory subject group in the field of study Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	3	Language of instruction	Polish
Semester of study	5	ECTS credits	6.0
Learning profile	general academic profile	Assessment form	exam
Conducting unit	Department of Energy and Industrial Apparatus -> Faculty of Mechanical Engineering and Ship Technology		
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Krzysztof Kosowski	
	Teachers	dr hab. inż. Marian Piwowarski dr inż. Wojciech Włodarski prof. dr hab. inż. Krzysztof Kosowski	

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	45.0	15.0	15.0	0.0	0.0	75

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	75	6.0	69.0	150

Subject objectives

Present the principles of turbomachinery theory and design.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K6_U07] is able to use basic knowledge of fluid flow machines and methods related to their design in an analytical and numerical approach to the preliminary design of an energy installation	Students can perform preliminary design calculations of turbine power plants	[SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment
[K6_W02] has a basic knowledge of physics (including optics, electricity and magnetism), chemistry, technical thermodynamics, fluid mechanics and general mechanics needed to understand and describe the basic phenomena occurring in devices and systems, energy plants and transmission networks and their environment	Students know: - fundamentals of thermodynamic cycles of power plants with steam and gas turbines , - theory of turbine stage, energy losses in turbines, - multi stage turbines	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
[K6_W09] knows the dangers of electrical devices and the principles of protection against them, has basic knowledge of heat exchangers, has basic knowledge of power equipment such as pumps, compressors, turbines, combustion engines, boilers, pipelines and their accessories and methods of their selection depending on the needs	Students know: - fundamentals of steam turbines, gas turbines and compressors, - the main parameters of turbomachinery,	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge

Subject contents	LECTURE: STEAM AND GAS TURBINES: Actualizing power cycles. The Carnot cycle: cycle and heat flow diagrams. Comparison of steam, gas, and combined cycle efficiencies. The Brayton cycle. The Rankine cycle. Methods for carnotization of cycles. The steam-gas cycle. Effect of process irreversibilities on cycle efficiency. Efficiency of the power plant. Purpose of main components of steam and gas turbines. Principle of operation of a turbine stage. Course of the thermodynamic process in a turbine stage. Characteristics of turbine stages. LABORATORY: Measurements of model hydraulic turbine operating parameters. Preparation of the I propeller water turbine characteristics. Preparation of the universal characteristic of Kaplan turbine.
Prerequisites and co-requisites	Fluid Mechanics, Thermodynamics

Assessment methods and criteria

Subject passing criteria	Passing threshold	Percentage of the final grade
Lecture written test	60.0%	70.0%
Laboratory experiment reports	100.0%	30.0%

Recommended reading

Basic literature	1. Perycz S.: Turbiny parowe i gazowe. Maszyny przepływowe tom 10. Zakład Narodowy im. Ossolińskich Wydawnictwo Polskiej Akademii Nauk. Wrocław 1992. 32 Kosowski K. at al, Steam and Gas turbines, Alstom
Supplementary literature	No requirements
eResources addresses	Adresy na platformie eNauczanie: Turbiny parowe i gazowe - Moodle ID: 40309 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=40309 Turbiny parowe i gazowe - laboratorium - Moodle ID: 42299 https://enauczanie.pg.edu.pl/moodle/course/view.php?id=42299

Example issues/ example questions/ tasks being completed	Design parameters of steam turbine power plants. Heat exchangers of feed water in steam plants. Design parameters of gas turbine units. Principle of turbine stage operation. Design of multistage turbines.
Work placement	Not applicable

Document generated electronically. Does not require a seal or signature.
